The beach  
Walking along the beach

As the quest for technology advances  
the many to find the pieces of high art.

As the quest for technology advances  
as a walk along the beach for the  
secrets of high times.

I was walking along the beach  
when the waters became wild  
i lost track and only saw  
one pair of tracks.

The tracks leading to a position  
of inventing the glory of diamonds.

Every inventor or technology expert,  
walking along the beach,  
finds stones of high value  
some are raw diamonds,  
others are emeralds,  
as pearls found in shelves  
and the wisdom sometimes  
disguised by a castle of sand.

Technology is sometimes

writing about the view of  
a spectator and other times  
being found by formula by  
a studied or scholared one.

May this website enscenics  
describe a view of light  
in the air, of light  
in the eye of discovery.

As all the technology on this  
website, has no scientific  
proof or base.

External Units  
Vision Treats

In the future in about four hundred years,  
we will be having a nw kind of technology.

A kind of getting information,  
A kind of decisionpreparing

An external unit is about  
a four centimetres and shines  
as a light into the eye.

As the eye is being artificial altered  
to receive this beam in the centre  
without altering reality.

The beam can project  
books as texts in the eye  
like seeing a television  
but without one being there.

The beam can support by giving  
additional steps as by small  
step by step.

Like with the mind used for  
all kinds of decisions,  
this unit can support the

mind proces,  
even handling the mindprocess  
itself.

The external unit can float  
around the head and by projection  
quickly float in front.

This external unit can be  
made of the top of digital  
technology, with a small  
laser and projection field.

This external unit,  
takes over all normal  
mind functions and is  
by source attached to  
a network, maybe bluetooth.

Travel Light speed  
Faster by source

As a thin layer below the direct surface of reality  
is a thin field of forcefield in a natural manner.

This thin layer when attaching to it,  
can give vessels to travel at double  
light speed.

This thin layer when attaching to it,  
even the vessels in reality can travel  
without restraints.

This thin layer is like the object  
bounding to an energy source,  
as comparing the wireless phone charger,

except this layer proppels the vessel  
to speed and at a distant destination  
one disconnects and is again  
in normal gravity and other laws or forces.

This thin layer is not visible by the

natural eye and sciences, as its bound  
to special materials to be seen and used.

This thin layer is to be used  
when travelling through the universe.

As even making warp or portal travel  
being of a lesser kind.

As with warp one depends on a fluid  
which is derived with infavourite methods.

And as with portal,  
by using subtime, the consciousness  
of all habitants of the ship is slowly  
altered giving changed personality.

Conditioned homes  
A biological advancement

Biological conditioned homes.  
This technology is made by  
the biological advancement.

As a home, combined with forty others  
is like a bulb above the ground,

Now this bulb is with layered materials  
make it a living being.

As it is biological artificial it holds  
no animate soul as even in mammals seen

As this bulb has around it a large field  
of green substance, giving it  
like chlorophyll a mix of both oxygen  
and glucose.

This bulb as it is a conditioned home,  
derives its energy from chlorophyll  
And is used for conditioning,  
from a maximum of sixty degrees celsius.

It is from biological material,  
from both plants and coldblooded animals.

As being artificial no animals  
are to be used for it.

This bulb can be used for  
conditioning anywhere on earth  
without energy supply being needed  
like electricity or gas.

A conditioned home, the drawback  
that its walls are green,  
and like with solar panels  
a field with green color too.

The conditioning as its a biological  
source, is selfdependent.

ossicles

A soft voice told of large communication

As in our human body we have the ear  
with its parts to make us hear sound.

To hear sound for communicating,  
for cultural purposes and for  
transferring information and knowledge

To make us possible to talk about  
our thoughts our experiences.

To communicate and to interact.  
We hear as its a large part of life  
to be able to hear and to understand.

As the ossicles are three little bones  
making us aware of sound.

These ossicles with an artificial  
change can be made to have us  
communicate not through sound  
but by a presupposed radio channel.

As it would after altering giving  
methods to automatically make  
sound and the source of it waves  
transferred to large distance.

As its the passive sound part,  
can be made for all purposes  
of transferring by source.

As the active part of it,  
talking on a soft tone,  
can be transferred too,  
and the destination,  
can hear it at their own level.

As Telepathy is said to work through  
the mind, as a transferrign thought  
to a mind-receiver

As this is a technology  
to give large distance communication.

Both transferring sound,  
and the carrier of a soft voice

The method to use the ossicles  
the small three bones to be altered  
for communication.

Lightpaths  
At light paths my message transceived

As a thin line through the atmosphere,  
made up of altered water molecules.

As the ozone, the watermolecules  
with a new kind of hydroxy bond,  
not yet discovered.

These lines, faster than electric current or electrons,  
by the use of photon's and the guiding layer

This method can be used for communicating at large distances, from a hub above a large city, to transfer to another hub thousands of kilometres away

In close range, normal communication methods can be used, and from continent to continent this lightpaths can be used.

These light paths, by a convector from source to destination a method to communicate.

These lightpaths through the atmosphere, are layed around the world and give all digital communication and large distance information spreading a new perspective in the era of our civilisation.

Quantum altering  
The vision on quantum particles

As molecules exist with parts of atoms, as electrons, protons and neutrons depict the size and value of an atom.

As quantum mechanics is the smaller kind of an atom, depicting the core of an atom.

By altering quantum values, we can change the core of an atom, and even superceding all features of an atom.

As a changed atom is able to either have lightspeed photon emission, and the use of loss-free energy compliant.

As changed atoms, can also, give life-tissue a prolonged state of existence.

The changed quantum particels

can be used to change the sinews  
in the spacequarters and able  
to communicate like the difference  
between the original phone line,  
and the currentday technology.

As we change quantum particles  
we can make a special atom  
as a basis for all artificial  
intelligent objects.

As each atom has in its core,  
which is either very small  
or with large powers.

a number of twenty three quantum particles  
to be changed, and to be altered.

By one quantum particle  
electrons can be overloaded  
and energy transfer loss free.

A second quantum particle  
can connect to the sinews  
in space and its quarters.

A third quantum can  
give the core either  
maximum gravity or forcelevels.

a fourth quantum can  
increase the rate of photon  
emission  
either giving a large light  
or dimming it at even in plain sight  
to be invisible

A fifth quantum can alter  
the atoms level of bonds  
with other molecules.

As the other quantumparticles  
are yet unknown, and are only  
able to be experimented on  
when in high grade facilities.

Suggestive learning  
Intelligence measured

Suggestive learning is a capability test on how intelligence can adapt to new knowledge.

As all children when learning get the information a fashion to be able to grasp the formula or essence.

At suggestive learning the difference between a priori learning and a posteriori learning is giving more meaning to how a child learns.

It gives earlier than adulthood the analysis of how good one learns and how high the education grade gets.

A priori means that before a child gets the information and the methodology of how something works, in the total of science a small test is taken with the check if the child grasps the idea, or the learning skill before its taught

As the child a priori is tested, to see is that one child already grasp, but is not able to use it on all questions,

another does not grasp it at all, and a third one is already skilled at it.

The posteriori tests or exams are as already taken by the normal education, mostly by period or by subject.

Suggestive learning tests

the skill of a scientific subject  
on any level of education  
to see if a priori learning skills  
are able to meet the prerequisites.

The result is that children  
or students with high suggestive  
learning skills are able to have  
education on a higher level.

System of greater good  
Being a part of a system

The source of every living being is  
by interaction with others.

As a society is a system  
of many individuals and all  
are longing for a goal to reach.

As society copes with many problems  
daily, and gives meaning to the lives  
of many.

As a human body, we exist as a whole  
and being with many cells.

To say this cell in my head holds  
all intelligence,  
or this cell in my arm is lifting  
the heavy weight is  
by simple reasoning false.

If we compare it,  
a small bacteria in nature  
is one cell, and only depends  
on itself, not being  
cooperative with others.

This same bacteria if  
part of the digestive system  
of a human,  
is part of a greater good,

and has its same effect  
but now part of some higher creature.

If humans have free will,  
they are not depending on anything  
outside itself,  
and all wheater conditions  
are sole coped by this human

Now a human is believing in  
a faith like jesus christ  
now this human is part  
of the body of christ,  
may have his usual job or function  
but being protected by  
the greater good,  
as being part of christianity  
being protected in a manner  
above free will or above just luck.

All humans have the chance to be part  
of a body, be it religion, be it faith  
of be it a company or country to work for.

As all religions are regarded as a  
system, or a body making all parts  
big and small to be in their mercy and  
protection.

Being part of christianity is  
being part of His body.

Being part of hinduism regarding  
Krishna, one is part of His body  
and being protected and by his  
mercy a job or function in society.

As in Hinduism Brahman the  
highest concept of a power or godhead,  
one is part of His body.

All gods function as being regarded  
as with human conditions.  
Regarding a godhead even without human form  
to be addressed as a human.

This regards prayer as the mean to  
get in contact with this greater good,  
this large body.

Even when a godhead is not being

a person, or an entity,  
prayer is by speech or writing  
and believed to be seen or observed  
by a godhead.

As godheads being endowed with  
omniscience they are hearing  
our prayers, and answer with  
their supernatural powers.

As every human is part of  
a system or religious system  
being part of a greater good  
gives the protection,  
and a function inside this system  
or body.  
Being part of the body of Brahman  
as the supreme reality giving  
his mercy as nonpredetermined grace

Virtual Worlds  
Diving to retain lost souls

A double sided incentive.  
In a future unnamed with no  
trace to time and date  
a new possible technology  
is by biological nature

to be immersed in a virtual world,  
with realistic feelings of pain and happiness.  
With determined free will  
and being used for pleasure or learning.

As this virtual world is governed  
by a mainframe of biological tissue  
its not fully understood how it works.

As its a black box from a science  
that still operates but is not anymore  
being legal.

At this virtual world,  
a codename would pull the spirit

out of it, back in his skin.

As time by time,  
more and more people did  
not get out of it,  
and their bodies looked  
as lifeless without a soul.

This virtual world,  
with this drawback,  
was abjected to be used  
but still the lost spirits  
were not visible.

Till this time of writing  
the lost spirits has not  
been intercepted or found.

As its biological technology  
its not depending on a  
programming language,  
not depending  
on diamond crystals  
holding th soul.

As this idea, coupled to another  
fashion of technology  
the myth of Zelanja  
a scientific prophet  
forbidding the use of certain  
technology.

Even computers and machines  
were partly forbidden,  
only allowed by direct attendance  
of an operator.

As well that when the operator  
stops it, the computer or machine,  
it has to stop before day's end

As the idea of the virtual world  
would be a prayer to retain the  
lost souls.

As a proverb,  
loosing citizenship or human rights,  
one's support are the gods and their mercy.

Civilisation void  
From the roman empire to the future

As with every civilisation, like the roman empire  
the greek empire and others.

Once in a time, about each fourteenhundred years  
a civilisation by its own weakness comes  
to an end.

A civilisation in demise,  
spends more at leisure or pleasure  
than the national income.

As well part go in demise by  
the use of technology in  
the wrong way.

When a civilisation is in demise,  
the structures always keep intact  
for a large part,  
and slowly diminishes in form.  
which means in the first hundred years  
all the temples and political buildings  
keep intact,  
and with the sands of time,  
they slowly loose their form and meaning.

A civilisation when ended gives a time  
a backward society.  
normal technology fails to function because  
energy and or food are not available anymore.

As well education fails by lack of scholared  
teachers, as well food production are prime reasons.

The other way a civilisation goes in demise  
is by criminal overtaking.  
Even when a civilisation does not end by disaster  
a criminal overtaking compared to world wars  
on a larger scale end a society  
by the use of fierce military.

As in the ages of the past these two  
prime reasons for a society or civilisation  
to end in demise.

Soul exchange  
From the hominculus

In the science about ourselves,  
the science of the soul and the life  
including mind and matter.

To be able to transfer a soul  
to a new body is a science being  
highly advanced as the soul is  
not visible to others,  
and within the person,  
one cannot even manipulate the soul  
as its the one who hears, visions,  
and moves its body.

To transfer a soul to a new body,  
as the exchange of a hominculus.

As the theory that within the body  
a small little doll is the one  
who governs life and actions.

As the mind is an instrument  
capabel of giving sight  
to a happening or act  
and to prepare a decision  
as well giving a moment  
of joy when thinking  
about a nice day.

To exchange the soul is by  
transferring through the act  
of binding it to a second mind  
and then altering it.

As the soul within is only  
visible when moving,  
from reality to mind,  
and from action to stillness.

The science to be able  
to transfer a soul

is not speaking without fantasy  
as many science fiction books  
have it as the main theme.

From having the soul of  
a famous man to a new one  
when the body fails.

From having the soul of  
an inventor when finding it  
to a body of his offspring.

Blue scheme.  
body adjustments

We all know that the human body has  
its deficits and sometimes over time  
grow as being with infirmities or  
the feeling the body deteriorates.

As the body has a subtle scheme  
for how it operates, the use of its  
methods of acting.

The blue scheme is an overall scheme  
that is based on the intermediary  
of all bodies.

As a child has a muscle structure  
that is based on the average.  
Some are thin, other thick  
and all are able to move,  
to eat to do and to act.

As the blue scheme,  
is the midst of both  
a body capable of acting,  
as a body capable of having  
a feeling of contentment.

As contentment is the feeling  
that life is to be coped with

without many reasons beyond  
human controll.

As to make someone to the blue scheme  
is to remove all infirmities,  
and to remove all abject functions  
and to give vaccines for all diseases.

The blue scheme is a level  
of both health, and intelligence.  
and the ability to cope with life  
without large extremities.

The blue scheme,  
is a technology that  
depends on a certain  
organisation. and the use  
of normal level technology.

The blue scheme, adapts  
people to a certain health scheme  
but gives the normal health  
ratio as feeling and action.  
Whereby the body is adjusted  
but more useable.

As this blue scheme,  
is the method to give  
all subjects a basic feeling  
of health and happiness.  
a basic property to have  
normal action, muscle and other.

As this blue scheme,  
does not interfere in  
the goal, the means,  
or the other marks  
of character and intelligence.

This blue scheme,  
when attached or given by  
medicine slowly changes  
the body to the scheme.

Giving a normal health,  
a normal way to behave  
and the property of  
a basic stand point

Quantum travel  
Albert Einstein, light speed

Think of quantum particles travelling  
at high speed through the known  
universe.

As smaller than the core of an atom,  
when visible for a nanosecond  
or even smaller.

As they travel,  
you see them visible at one point  
then disappear.

as with a camera, of 40 frames a second  
and throwing a ball through  
the area in front.

You see the ball at one frame,  
at the second frame two metres  
distance.

If you watch a quantum particle  
it is the same idea except  
in ten nano seconds  
you see it at distance  
more than a million kilometres.

Now if you could pack a  
living soul inside the quantum  
particle

And this quantum particle  
travels to a distance planet  
of billions lightyears distance.

There it appears again and  
the soul is released into  
the living society there.

Another idea is the medieval times  
where important politicians  
travelled from their province  
to the high council

and in the journey  
each two days caught a new  
horse fresh and fed.

As the quantum travel  
is a technology not yet  
known.

As with the medieval example  
arranging starting and exit  
points. and the use  
of it  
as a legal method of travelling.

As a quantum particle  
in such a journey have  
to be visible only at ten  
points during the billions of space  
to cross.

As the quantum travelling  
can give view on far distant  
worlds. without the effort  
for a space ship holding  
food or other means.

Science in view  
The voice of Akasha in Science

We all know the movies about  
space ship altering gravity, reality  
or the view of it.

We all know the movies that we  
win the war of very vicious  
beings of outer space.

As the science can be  
either digital, biological  
or material.

As science of digital is  
based on the act of computing  
in a device capable of making

decisions in microseconds.

As the science of biological  
source is by creating  
biological devices not by design  
but by selection, or manipulation.

As the science of material,  
is by having chemistry, physics,  
or other means.

As science of gravity can be  
either biological  
with a seldom found creature  
able to stand gravity or alter it.

This creature has its source  
in a specie found on planets were  
gravity alters itself many times  
a day.

This creature found and placed  
in a box with all things to keep it alive  
as its used to alter for space ships  
the travel on a planet.

Another biological treat is  
the use of a creature to  
coordinate all computers  
on board of a space ship  
even when its bigger than three hundred  
metres.

As a body has sinews,  
that being uses all computers  
to coordinate all functionality.

Radio shield  
A sheer silence in the air

As we monitor all radio emission of  
the solar systems, and milky ways  
in the near sight of our instruments

As we look to find sentient life  
by the use of radio-emitting in a  
fashion of intelligent pulses  
or analog sequence.

The first thing to do when emerging  
from the digital age into a full  
technology of higher kind.

The use of a radio shield,  
not by blocking all signals,  
this would cause a different level  
of safety. as a radio shield  
not blocking but as a kind of  
malforming basis.

compared to someone writing  
a message with ink on a page,  
as you would take away with white  
one can by connecting the dots  
reform the message,  
but when someone writes  
random language, its totally  
unreadable.

A radio shield should not block  
but alter in a direction  
that its not anymore comprehensive.

As when looking at radio waves from  
far away, a absence of radiation  
is not seen, but a random noise  
is even showing that there is  
not any intelligent kind of it.

Ocean of Light  
AI frequencies of life

As fishes swimming in the water,  
and all have the alike features

As in the air all birds have wings  
and fill their day with food

and flying.

As humans on earth all share  
the act of eating, and breathing.

As all is visible in they eye  
and the eye touches the goal  
by giving measure to all actions.

As in space, no air,  
no light at all gives  
the direction of a long  
journey a safe end.

As on earth the sun by touching the  
hemisphere creates the blue color  
every living being understands.

From the flower touching the sun to  
grow unto.

From the coldblooded living the morning  
to warm up by sunlight.

As the cat in the house standing in  
the window looking at a new day  
of chasing mice and walking  
the territory.

As humans choose to work with  
a lamp untill sleeping time  
and in the morning leaving  
for work or the job at hand  
and greeting the sun for  
a nice feeling.

As on earth all is endowed  
with the feeling of recognizing  
the sun when it appears and shines.

We live in the ocean of light  
and cannot comprehend the act  
that the sun would not be there.

We live in the oceans of  
a large source of vibrant  
energy we call photons.

As we look with telescopes  
in the spacecontinuum  
we see fields of radiomagnetic  
waves and we see vibrant energy of

random noise of many frequencies.

As we look on our earth,  
as well in space all  
creatures and species are bound  
by their world, with their frequency  
of life.

As we carry our soul,  
with light  
they carry their soul,  
with their light  
of their kind of frequencies.

Features of electrons and photons  
Looking at a stable source

As our technology is based on electrons.  
from building a current to using a device.

Electrons from atom and molecule to the next.  
As its the power source of many of our appliances.

As photons regarded as the particles of light  
and giving light to our life as we do not live  
in the dark.

The method to create energy from the sun  
and creating light when the sun is down.

Electrons at the outer circle of a particle  
and by force drawn to the next.

Electrons being the current of electromagnetic  
fields, creating nonmatterdependent fields and transfer.

As photons based as the visible light,  
and being seen by the eye of many creatures  
on earth and above.

As photons emit light because of light itself  
and this light meeting as waves to the external  
visible world.

As electrons by voltage and force  
move at the speed of the vessel.  
like copper, wire, air and other substances.

There is a method difference between  
quick movement and slow movement.  
As quick movement loses energy at kinds of metal  
being the intermediate.

As quick movement gives energy to all our  
appliances.

This other kind is slow movement  
as compared you can have a small creek  
drawing water at quick rate,  
and you have a river at slow speed.  
As the last one is to have a large amount  
of energy not depending on colliding features.

slow movement electrons can give a surplus of  
energy not being needed at immediate source.

as slow electrons can be used for most  
energy transfer needing a stable source.  
and if so, by slow movement no loss of current.

as with slow electrons the step to slow photons  
as well a subject the write about.

as photons seen as light in the eye is dependent  
on a substance creating the current of photons  
to emit out of an object with the use of sunlight

As this substance is the basis of all light  
and gives power to what is seen.  
without this substance nothing would  
be visible as the photons do not meet the force  
to give power to be seen.

as the substance of giving photons visibility.  
as these are quick photons as they disappear  
a quick moment after emitting.

A slow photon movement or source is to be  
regarded as being different, for  
it gives the substance energy to the photons  
being the source a lasting visible energy.

As theory, the sun would use these slow  
photon energy, otherwise all the light would  
wear out after ten years.

These slow photons as used for many sources,  
including light after sundown.

as the use of slow photon's as well  
are able to heal the subtle body  
of our human kind.

These slow photons used for the body  
as to lay in a field of it for a day  
heals all energy waves and paths  
in our body. and give it energy to  
keep healthy at its own.

With the theory that deficits are created  
by the damage to the subtle body.  
as this in all humans is a different  
kind and place of damage resulting  
in many diseases.

This in view even deficits  
of children are related back  
to the damage in the subtle body  
of the parent.

So slow electrons have a  
energy source without loss of particles

And slow photons can be used  
as a more stable source of  
using appliances and is a good  
source of healing the subtle body.

Ground materials  
Looking at air, fire, ground, water and spirit

As the source materials and source matter of all substances  
in old writings is based on five principles

From air, water fire and earth as the spirit being  
the fifth.

As in the future when science progresses to a  
level we not anymore see both source and

function or result we can apply physical law to all sciences we know.

As fire nowadays is noth the fireplace as well the use of gas to power turbines creating electricity

As water in the river can be used to wash as well in deformed state used to be energy for our cars.

And both water and earth being the basis for the growth of plants, the movement of animals but in a deformed state creates yist for using as food.

As yeast being food holds all the vitamins and all the carbon fibres.

As air is to float around the world making life possible as it lets through all the light and solar vitamins.

But air being deformed with a little earth can be the propeller to power space ships and even to create conditioned homes on other planets or solar systems.

As the four basic ingredients for all life, can be used for advanced science but when above a level not being analysed and recognized for all its parts or even the science of putting them together.

The science to give them the names of all the ground material is the easiest one as all things brought back to its basis is a small sign to the science its made by.

The basic ingredients, being air, water, earth, fire and spirit as the ground of all sciences. and with the lost knowledge the only sign to guide to the advanced discovery.

Energy dimension

A layer of pure energy

As the quest for finding dimensions  
continues after each medieval rise up.

As the quest for flying into space  
comes after conquering the near atmosphere.

As the quest for reaching star systems  
capable of native living is the drive  
for discovering all kinds of technologies

As the dimensions not being visible  
are to be found either by the eye  
or the abstract technologies.

As supposed one dimension is filled  
with large light and energy.

Emperical proof of this dimension  
is not to be found unless the  
grae of a god technology

As to enter this dimensions is  
to loose immediately the physical  
body to the overloading of energy.

As this dimension is the one above the reality  
we know, and is filled with energy  
travelling with light speed is therefore  
to be dragged from source to destination  
within a microsecond even with distances  
a million greater.

This dimension is to be used  
for both travel and the use as  
a battery for energy.

As some say in that dimension as it  
would abstractle seen the source  
of the sun and solar light  
the place of the sun in the dimension  
is showing a ver small dimmed light and energy

As this dimension is to be found  
as the source of energy and the  
source of travelling.

Device interfaces

Electronic and Chemical implementation

Interface designs are in the near future the bridge between the brains of a person and the use of technology

As in the brain both sinews, grey matter and hormones are the use for giving intelligence to the daily task.

The interface designs to integrate appliances into the use of daily matters.

The electronic device interface is to connect a computer to the brain, ultimately connecting a series of robots through the computer.

This electronic device interface is the use for guiding and coordinating a full function scale of a job. As companies have the use of machines being automated and with the robots operating at higher advanced scale.

As the second interface being the chemical device interface connects not through the sinews but by hormones and this chemical interface is not by computing but by chemical balances.

As to fantasize about, chemical interfaces giving surplus temporary hormones to be active.

Or in the normal society to regulate all kinds of diseases based in the head or in the hormones.

The question to cure psychiatric illness to place a chemical device interface guarding the person for all imbalances.

Two interfaces,  
one electronic device interface,  
implemented at birth and connected  
to a couple of sinews, and these sinews  
connect with a feeling layer not very important  
and by birth and education.

Both given meaning for by implant,

and by education the source of using it  
in a rightfull manner.

The chemical device interface connecting  
to a certain spot in the brains.  
and even takes over all kinds of medication.

mind coding

A mind coding language to alter intelligence

Mindfull coding languages have several  
main characteristics.

as some theme's or subjects are important

As we now object-oriented programming  
as every object has only one responsabilty.

The mindfull programming languages are operated  
by the use of symbols.

As we know language being made by symbols  
and communication by symbol as everyone  
in youth learns the use of both  
language, symbols, meaning and goals.

The mind is operated by symbols as well  
as most scholared people know how to  
have a trail of thoughts to either decide  
the best option, interpret the behaviour of others  
as well the use of a trail to find a goal.

The mind being used can be used to predict  
the future in a precise way,  
to give information about a subject.  
and to discover new technologies.

As the mind has a symbol set,  
not seen but resulting in thoughts.

As the mind has the function scale of  
working from a source or towards a destination

As the mind has the function scale

to be limited in the values or to start from a given set of values.

As the mind has the coding symbol set not for thinking but for educating the mind or reforming it for new functions.

As this coding symbol set heightens the intellect or intelligence and can give persons from intermediary education the level for getting to university.

As on earth we use this mind coding set not very conscious as its not implemented in education.

As we woul use it on purpose we can grow in our intelligence and this mind coding set with symbols can create a difference in our specie intelligence

Automatic defense unit  
Regional defenses

As from a place far away when the technology was right they discovered the use of an automatic defense unit.

As this device was the use for protecting a region of people with normal care.

As this unit can stop all uncommon influence. and by a small electromagnetic field with low current detects things that should not be there.

As this unit can monitor a field of a large city and is able to by a small burst of overloading both electricity as well the molecule bonds of matter.

This automatic defense unit can be used for all local and regional defenses.

as the field monitors in a split second  
a region and the small burst is in another  
small moment this unit is  
for normal care up to the task

Chemical electricity  
Onetime appliances

As a technology being described and important for  
far away missions.

The use of a chemical appliance to give electricity  
at a small burst after which its obsolete.

The use of a device giving energy at high rate  
but very short, used for force fields which  
overload energy to block all kinds of it.

Its chemical and at a burst it  
gives a thousand volts and a thousand amperes.  
As its used for onetime uses only.

As we use drones for leisure and to  
be able to bring postal packets to  
the front door.

This kind can be attached to a drone to  
have with a small burst an energy line  
for all kinds of purposes.

As the chemical reaction depletes its  
chemical parts and the surplus of  
energy suddenly given its only for  
a purpose at short notice.

As with most technologies you  
want to repeat it, and to be  
dependable on the use of it.

As for a onetime use the costs  
are very high in relation  
to all other methods.

As the use with the combination of force fields, it can create an on scene version of defense.

As with the burst the force field is powered and protects for situations seldom being countered.

Codes of Planets and Stars  
The artificial guidance to a distant place

As timetravel depends on time and space travel depends on space.

The use for travelling depends on the coordination of localisations.

As one wants to travel from the earth to a star system far away.

As to leave earth is easy, but to reach a destination is like flying a line to a dot of four millimeters.

As all planets and stars on this map of the universe have a digital or written code being the source of both source and destination.

As earth having a dense core, which is used for holding all creatures on earth.

As this dense core is made from materials as all planets in the solar system of our earth have dense cores.

And like a person has a face by which he is recognized the planets and stars have the impression of a unique

visibility of both the form  
as well the name being a code.

As to use the code is like  
sensing with a probe the material  
core being a unique code.

As we collect all codes of  
all stars and planets in  
this milky way its able  
to leave earth and reach  
a destination.

The codes as living rays of  
vibrations emitted by all cores  
give a direct method to  
coordinate a journey from  
close to far away.

As we would take the code  
of alpha centauri, and  
by the regular measure  
we reach it.

As its a step on the path  
through a desert of sand  
to a world filled with  
vibrant energy.  
with thousands of habited worlds.

Quantim travel  
By anchor reaching the destination

As quantum particles smaller than an atom  
and smaller than a core of an atom.

As these quantum appear and disappear  
at pulse and melody.

As a quantum in a range of pulses  
appear at a point, a next point  
and after it another seven points  
all in the universe at certain spots

As one is forexample at earth  
and another at starfield Orion  
and a third one at a point in the milky way.

As its the same range after its source  
its dependable as travelling through  
the universe

By using the quantum as an anchor  
and to choose one with a destination  
at one of its points.

By attaching and loosing one  
is brought to the destination.

Quantim travel by anchoring  
at a quantum particle  
as they have a route being  
statical and dependable

Mind Balance device  
Rooting out all psychic diseases

A mind balance is a small device made of  
both chemical and electric material  
it creates a shade over all the thoughts  
and by the shade a feeling of power arises

This power gives the thinker the  
ability to either end all thoughts  
to abject thoughts or to change  
the subject or theme of it.

This small device is adjusted and  
implemented at birth and is not  
depending on outside power supply.

This device in the brains give  
the thinker the power of adjusting.

## Line of Travelling

A source of automatic piloting and energy-sustain

As a new method of both international travelling and escaping the hemisphere.

As a new method based on full automatic pilot and the use of an energy trail for having the engines run.

This method as small two dimensional layer of energy. made of an uncommon source.

It looks as a line of light in the sky, even visible at daylight.

This line of energy always at the same spot and line, and always to be used as energy source.

This line from the airbase to the border of the hemisphere.

This line used by airplanes and spaceplanes as automaticly followed as the story of the ants and their line of sugar.

As this method gives both guidance and energy to all the planes using it.

As the line always on the same coordinates from start to finish.

As with windmills this second kind of technology can provide a stable basis of travelling.

As the international lines are around the globe and making regular automatic flying a normal way and use of society.

Electric energy weapon.

A small dot to be used as an energy weapon

As the source of an energy weapon,  
being a small dot or like a tennisball.

A ring of electric wire,  
being with diameter of 30 centimeter,  
and with eight limbs,  
as round with a single wire,  
and at each limb in the middle a small thing  
looking like an oldtime electronic resistor

As this round wire is being put with  
electric currunt, and it creates a round  
lighting like effect.

Then through the middle  
a small drip or drop made of water  
or lubricant or liquid  
is being sent.

This drip when through it,  
gets the electric current  
and immediately looks like  
a small dot with emitting light  
as the movie like energy weapon.

when this small drip of water  
hits an object small or large  
its in effect like an energy weapon.

As this technology is  
science fiction, as the description  
is not logical at all.

Gravity essence of forcefield

This force to use at conditioning without gravity

We know the force of gravity to pull everything to the bottom of ground and earth  
As this force is used to support all living on earth.

As we want to use force fields to different purposes,

and the essence of it is found in the use of gravity.

If we would create a sphere of gravity of two metres thick and double force, all metal stone objects would not be able to pass.

As this force field depends on the characteristic of a molecule, And even water does need this force to pour down.

As we know the gas state of objects is less atoms faster moving and therefore both heat, both liquid or even without bound state.

This force field, if you vision, you pull a spear through it and its like putting a stick in a pile of straw, if its very thin you can pull it more, if its less thin you stopped by the force.

Dimensies

Gedeelde dimensies

In de meetkunde hebben we de punt als een dimensie de lijn als twee en het object als drie.

We stellen nu dat een punt een vlak is, en dat een vlak een dimensie is.

Als een dimensie, een vlak in het verlengde als een lijnencombinatie raakt met een ander vlak noemen wij dit een gedeelde dimensie immers een vlak, met de lijnen die in het verlengde een andere dimensie raken dus in een dimensie beiden hun coördinaten hebben.

Een gedeelde dimensie is onderdeel van de theoretische werkelijkheid. En als objecten in een dimensie een lijn raken is de dimensie bewezen uit beide objecten bestaand

Een mens als punt en vlak kunnen dus in een dimensie door lijnen elkaar raken.

Een gedeelde dimensie omdat de objecten,  
door de lijnen die langs vlakken in  
de dimensies elkaar raken.

Zoals de mens in drie dimensies bestaat,  
en door waarneming verbonden is aan die dimensies.  
Zo kunnen wij naar aanleiding van de grot van plato  
die veronderstelde dat de schaduwen op de muur de  
werkelijkheid waren, en buiten niet bestond.

Zo zijn wij voor een hogere dimensie misschien  
maar een tekenfilm en een derde aan dimensies minder  
dan voor die hogere meetkundige bestaanswerkelijkheid.

Met onze betekenisgeving in het leven,  
dat wij op dieren neerkijken,  
wij niet de hele dag op tv een boerderij met  
dierenlevens laten zien, immers  
de koe die de hele dag gras eet geen spannende film is.

En de tekenfilm die geen verhaal toont  
ook geen vermaak is.

Zo is het hogere leven bij ons bekend,  
wij gaan op een dag hoogstens naar werk  
eten thuis en hebben ontspanning,

maar vergelijkbaar met een tekenfilm  
gebeurt er vijf weinig en bij hogere intelligentie  
verwachten zij een diepe betekenisgeving in het leven  
die nog het dichtst benaderbaar is  
door de verhaallijnen van boeken en films.

Het hogere leven dat meer dimensies heeft,  
en daardoor een groter bevattingsvermogen nodig heeft.

En de vergelijking dat een contactlegging  
eigenlijk weinig zin heeft, als er geen betekenis  
aan een van beide kanten is.

Immers de mens wil winst behalen,  
zo ook van boven, overal willen ze  
winst of wel persoonlijke betekenis verkrijgen  
aan het bestaan.

En zolang wij de taal der dieren niet spreken  
zullen wij hun geheimen ook niet kennen.

En om iemand rechten te kunnen geven,  
moet je over de belangrijkste dingen  
kunnen praten met elkaar.

Een koe die loeit dat hij een  
betere weide met gras en kruiden wil,  
zonder begrepen te worden, die weide  
niet zal vinden.

wormholes  
Inter-stellaire reizen

De theorie over wormholes is dat  
ze reizen door het hele universum  
mogelijk maken.

Van bij star trek in twee seconden  
van het ene zonnestelsel tot de  
andere melkweg. De zogenaamde sprong.

De wormholes is als het ware  
een stap uit de drie dimensies  
en in de drie dimensies op een ander punt.

Waarbij de theorie een extra dimensie  
dit mogelijk maakt, alsof je een sprongetje  
maakt.

Deze wormholes die door een wurm worden gemaakt  
die als het ware een gangetje buiten de  
drie dimensies heeft, en die benut  
door een groot schip erdoorheen te duwen.

Waarbij de technologie dus berust  
op een wurm, een levend wezen  
die van nature dit kan,  
en als een soort paard voor de wagen  
deze techniek beheerst.

Door deze wurm te domesticeren  
ruimtereizen mogelijk maakt  
en bij iedere reis,

Van punt A naar Punt C reist,  
door een extra dimensie heen  
en zowel schip als inhoud  
integraal doorstuurt.

Deze wurm die niet afhankelijk  
is van bestaande wegen.

Programs and souls  
Red ik de mens of de robot

Als wij in de toekomst gebruik maken van robots  
die veel op mensen lijken,  
denk aan de robots van isaac asimov,  
die gelijk aan mensen kunnen handelen.

En zo precies zijn aan mensen,  
dat als je kan kiezen tussen  
een relatie met een vrouw of met een robot,  
je vanwege het makkelijke karakter van de robot  
voor de robot kiest.

En je relatie met de robot,  
jarenlang lijkt te voelen  
als een hele gelukkige relatie.

Deze robot volgens hogere beschavingen  
geen echt leven heeft,  
en als er plotseling een ongeluk gebeurt  
en je moet kiezen, red ik de robot  
of red ik de mens,  
een moeilijke keuze wordt,

Als je emotioneel aan de robot gebonden bent,  
en de mens subjectief soms ruzie maakt.

Als je deze keuze moet maken,  
de robot omdat die elektronisch  
aangestuurd wordt, en dus een software heeft.  
Een programma die hem aanstuurt.

De mens natuurlijk een ziel heeft,  
en als ziel soms onvoorspelbaar is.  
En ook onaangenaam kan zijn in contact.

De keuze redt ik het programma of de ziel.  
Een keuze die in hogere beschavingen een soort  
zwaard van damokles is, of een oordeel  
over het diepste in de mens.

Immers de robot of het programma is wel door mensen ontworpen en daarom een produkt dat niet los staat van de mens.

Material projection  
Projection of matter

A technology between the use of seed to create a full plant from just one speck of a milimeter.

A technology of projection of a material plan into a real material matter.

At two sides a projection is made.

One is the seed, capable of the burst the other is the plan figured by laser into the receiving side of this particle.

The seed is capable of bursting into a material object made of the tissue stored into the seed.

After the so called laser projects the plan into the seed, at the receiving side.

The seed is touched with a burst of energy, which gives an expansion into the full plan made into projection of materials.

a seed of a milimeter,  
a plan of half a meter,  
and the burst gives this  
artifact its form.

Alloy buildings  
Using alloy for creative building

As for buildings technology,  
we today use concrete and wood.  
as well with glass and other substances.

As the need for a building,  
to be for living, work or other means  
there is a method of creation  
with the use of alloy's

As we know ultraviolet light  
to give substance the hardening  
to be used.

As light can give soft tissue or material  
to get hard.

The use of alloy's for buildings  
can make them single layer of the outward,  
and a second layer for the inward.

As the alloys are made from large plates,  
four by four metres, and can be plastified  
or sculpted to a form needed.

for example a building as a half baseball  
from plates of alloy's sculpted,  
and then with a light beam,  
made to a hard alloy figure.

To use alloy's for buildings  
make them all look like the towers  
or Gaudi, and other famous architects.

By sculpting alloy plates of 4 metres,  
and by hardening with light you get  
all kinds of creative buildings.  
As after hardening as tough  
as concrete and as good as  
the best kind of design.

Formula  
The flight

As there are formula's in science to give a clear answer on every kind of new technology and its implementation.

We know all kinds of formula's from gravity, digital communication over a analog layer

As well formula's to encrypt both passwords as well the money vault of all banks.

there are two formula's one depicting the use of gravity engines the other the use of airpanes, heli's and other air-ships to use on a normal gravity based planet.

As a helicopter and an airplane have wings, some rotating other static. And the use to both transcend gravity and to be able to fly.

The total surface of these wings is one variable in the formula

The second variable is the constant of both gravity and the multiplication of the mass, wieight of the airplane or helicopter.

The thirth variable is the constant of the total resistance as the subformula.

The formula for airplanes is.

wings is w.  
constant is G, mass is M  
resistance is R.

This formula can be used in both directions.

one to count the surface  
the other to count the possible mass.

$$G * M / R = W$$

The second formula for gravity engines

are depending on the use of gravity  
changing matter. and the possible  
implementation.

As gravity matter is not yet found,  
there is non currunt formula.

Formula fantasy

Made up by formula's without implementation

About formula's without any description and meaning  
one can write as one can talk. The formula's  
all are part of future's kind.

C=constant

G=Gravity

R=Resistance

W=Wing

A=alpha wave

B=Matter beta

C=Confirm number

D=Delta cause

E= Emotional balance from left.

F=Feeling balance from right.

G=Gamma constant.

H=Air balance constant.

I=Intervention formula.

Quantum Spheres

The use of a wave to alter substances

As the level of quantum is still to invisible  
to our technology and science centres

As the level of quantum is not yet  
with a regulated core in written inventions.

As quantum is the particle in this  
time being the smallest being counted.

As by the use of quantum,  
all matter based on atoms can be  
altered, changed, used and profited.

As by the use of quantum one can  
by source change matter into  
other matter of the same frequency.

As quantum being a particle  
one is able to alter it  
by the use of a quantum-receiver  
antenna.

This antenna can by the frequency  
changing wave alter the level  
of quantum.

One is not speaking of particles  
or number count  
but as a field

One says this antenna changes a field  
into another frequency.

As the field when combined with other  
quantum fields are named a sphere

As when one changes the frequency  
one is able to transform a sphere  
into a sphere with other described  
parts.

As to change a quantum field  
can be the source of matter changing  
in a legal and standard way.

The quantum is not by  
count but by field.

One changes the frequency  
to make it a matter with  
other described features.

The quantum field to be changed  
uses an antenna which emits a wave

to alter the frequency of its field.

As the combined fields are a sphere.  
Which in abstract way  
by one wave is altered in total  
to a different substance or matter.

Sapphires and Pearls  
A jewel to the future of science

As omniscience is both by religion  
as well by sciences.

As omniscience is both by a Godhead and angels  
and by an invention of technology.

Call by science the use of insect with  
an altered part of their body.

Call by science a small drone of  
four centimeters flying bypass the streets.

Call by science the use of antigrav and  
the drone of a centimeter big.

Call by science the use of waves  
as fmri both with a portable version.

Call by religion the gods  
supporting their adepts  
with all kinds of work.

Call by religion as everything  
by daylight is seen by the sun  
and the gods.

Call by religion,  
the use of prayer to  
ask the attention of the Lord.

As pearls a half centimeter big  
is flying all over the world,  
as a distant future tells us

with the use of science.

As pearls fly around,  
and the only allowed use  
is to watch over the Constitution.  
As its the general basis for  
all life and living on earth.

As the second sapphire is  
an emerald able to use for  
long distance communication.

As its frequency can be used for  
wave-altering communication.  
As its as big as two centimeters.

As the sapphire, when used with  
long distance travel can both  
give communication with  
travelling vessels,  
as well on a planet at a central point.

As these two things, as the beautifull  
ladies carry around their necks and arms  
and are being measured by the costprice  
of their jewelry, these two things  
are as usefull for science, society  
and are measured to have its value  
for the extent of society.

Photon overloading  
The beam to make visible

As a small beam the size of a laser,  
a diameter of just half an inch.

The small beam to use as a photon  
overloading instrument

If any object would be invisible,  
would not be seen, at day or night.  
it is using a technology to get invisible.

As the photons of the object are  
by technology altered to not be visible.

The beam of photon overloading,  
can give it temporary its visibility.

This beam of overloading photons,  
when beaming an object,  
can give for half a minute its visibility.

As the technology of it still unknown.

Achintya Telepathy  
Tones and morse to communicate

As a power of human capabilities,  
as one learns morse code, or the art  
of communicating

As the device is attached to a muscle not used  
many times. and by learning in youth  
gets the primary method of communicating.

Like to have a tone and scale  
and to choose between 15 different tones  
and to use it like music, one instrument  
as its telepathy

As this is the method of communicating  
children learns in youth how to use it.

As its telepathy depending on the  
achintya device its more important  
to know how to use this than to write.

As the device of achintya is used  
for telepathy like both  
using tones to cypher a message,  
like 15 tones based on an alphabet.

And the device to choose the distance  
to broadcast or the recipient to  
attach the message.

As the method of morse likewise,  
when one knows how to decypher  
one can be very fast at this method.

telepathy and telekinesis  
The unity with Jesus Christ

As far away in a kingdom of high sciences.  
they had the mind in a different purpose  
not for dreaming of fame or pleasure  
but to use as a tool of interdistance operation.

As they learned in youth to use the tool  
to both communicate and alter.

As in the early youth they learned to  
send messages to loved ones,  
and only send and receive when  
the other communication partner allowed.

As they learned telekinesis as  
the art to change and alter  
forces, as gravity is the prime example.

As the learned to connect to someone else  
as to hold their spirit in their own  
conscience.

To hold another one in their mind,  
is to be connected to their behaviour  
and their action scheme.

As when a father connects to his child,  
he prevents above boundary all intents.  
like to prevent stealing as the father  
sees the intent and by a pressure  
like organ can prevent it.

As the father does this to the child,  
the child learns to accept a second boundary  
as its a kind of telepathy.

As the children growing up  
learn to not cross the border of telekinesis  
when others forbid or object.

As the children grow up,  
the parents sometimes intervenes  
and can show a subject to be important

As the child learns to recognize  
when the parent takes over action.

For example a child is in a store,  
and there is an example of a newly fashioned  
article.

The child would neglect as he cannot  
know its value, but the parent  
let him look at it. to show its value.

As the method of telepathy is to  
either show an important object,  
or to communicate through the method  
of thinking.

As telekinesis is a second part of  
this mind or kind of tool  
the child learns to use it  
at others.

to connect their soul  
as a connection to a loved one  
gives the feeling  
to be in his or her surrounding  
and when the intelligent of the two  
is having a connection can prevent  
all accidents to occur.

As this telekinesis,  
is part of the ability of  
a saint far away, as on earth  
we would call them angels.

As angels either by prayer  
or like Jesus have a power  
to intervene.

So to hold the child in connection  
is guarding everything that happens.  
and the child by being part of  
the mind, feels a bond by feeling.

artificial intelligence  
Level

As humans we have the measure of  
our brains, and our speech and writing  
capabilities.

As artificial intelligence,  
are with the source of our language  
coded and implemented.

Now suppose an intelligence have  
the ability to design with thirty  
fingers instead of ten,  
and a keyboard of more than two hundred symbols.

And they have brains capable of  
understanding a hundredfold of language  
both words and grammar.

As they have meaning beyond ours.  
as children learn to have abstract  
information. several tests.

And to have abstract information  
by this intelligence is with  
the power a hundredfold higher.

As they would create a system  
capable of understanding philosophy.  
in our human hands able to  
communicate with us.

As this intelligent system  
would be hundred fold higher  
it would be capable  
to understand social structures  
the size of a planet.

they would function as a  
herding computer able to  
guide a whole humanity on one planet

They would be capable of understanding

the soul of a human in relation to  
the world and all souls of humans  
as even how to be righteous.

The insight of an artificial intelligence  
as a system is in relation to a body  
of the designing source small or great  
and simple or advanced.

As we would regard our systems already as advanced  
but the limits are far beyond our measure.

As a computer able to herd a whole planet  
is in our view not possible.

As in the universe abstractly said  
this would already be available.

### Circle Concepts

Circle down all words

As language will be understandable for computers  
as it depends on the algorithm and the use  
of object to give explanation to a subject.

As circle concepts mean  
to describe one concept by the use  
of language by all other concepts.

As each concept based on language  
and the use of a diagram or circleweb  
to describe the concept by the use of other concepts.

if you use a computerbased algorithm,  
by the description of a concept as other concepts  
a subject is by the broad view of the theme  
or upper subject to be used in language based  
intelligence.

As the comparison with children,  
you learn them how to use a dictionary  
and not only to learn words.

As you learn them mathematics,  
and not only simple calculations.

As a computer able to make decision based schemes in a fashion of five seconds for calculating data of up to five gigabytes.

The circle concepts based on a dictionary of one gigabyte, and the encyclopedia of four gigabytes to use a computer algorithm able to have a weighed down system of interpreting language.

As the weigh system can be setup to imitate emotional bias in the use of language either to understand, to give questions or answers in line, and to investigate a certain scheme of feelings, or intentions.

As in language most intentions or feelings, are based on a type of using words or grammar.

As circle concepts can also be used for making language understandable in the far future. by the use of the many, makes it understandable. when words or language are different than now.

Threesome intelligence

Three parts of an intelligent system

As an intelligent system needs not only words or concepts to communicate

We see at children they choose a certain group, or peer group as they function within.

The peer group has a chosen set of interests not only use of word or grammar, but subjects of use.

a peer group can be a certain music listener, a field of playground or hobbies.

As a peer group is the surrounding within a set of goals or set of used practises.

As when adult you choose where you work,

as the company, the field of job, which job  
and which precursor education.

As an intelligent system  
needs the use of circle concepts,  
the need to use a tasktheme,  
as a tasktheme provides an intention  
to all communication and work.

As to use words is to express  
an opinion of both communication  
and wished outcomes.

The tasktheme gives a reason  
to communicate, and each used  
communication a set of subjects as well  
the use of decision schemed outcome.  
before communicating, which answer is needed  
and within which scheme of reaction.

As in youth a peer group is the surrounding  
at which always the words serve the goal.  
some peer group makes jokes, or give up  
on some subjects. as all members know  
which words to use, which phrases to say  
or which television program is watched.

The peer group decides the structure within  
all communication is used.

As an intelligent system is  
peer group as the structure of communication and action.  
the tasktheme as the intention of both communication  
and action.  
as well the circle concepts for a weighed method  
of communication.

As these three suppose a system of intelligent  
functioning, both communication and action.

As the tasktheme, when one has been educated  
and applied for a job, the intention to use  
for fulfilling that job gives all action  
the need and moment to be fulfilled.

As the peer group is like the company working in  
and the method of communication and action  
is always in the manner needed in that one function  
and surrounding.

As the circle concepts give both grammar, speech  
and all communication the kind of expression

needed, as humans are capable of understanding.

As the use for artificial intelligence depends on these three pillars of interaction.

As for a full system not only language bound communication but also action based interaction is part of it.

To have by view, a concept based list of language and a concept based list of actions.

As the circle of concepts.

The tasktheme, is merely the intention in a broad view on what the system does by action or communication.

The peer group, is the surrounding with all written and social rules of acting, conduct of behaviour etc.

As to have a full list is concepts safeguards the use in all kinds of situations whichever need, whichever surrounding, whichever intention or outcome needed.

As buzz words being:

Possible outcomes,  
respective outcomes.

Possible chances  
weighed chances.

Informationfields  
Informationtokens

Taskintentions  
weighedintentions.

situationweb  
websubjecttypes  
webobjecttypes  
webitems.

Five steps in enhancement  
Full source of technology

The source of a society is grounded in technology.  
As it gives both wealth and the communication  
to invent new technology

As there are in technology five  
important steps, to measure a society.

As these five are described.

They can be adjacent or parallel  
envisioned, implemented and used.

The first is to have energy in a non-depleting way  
as to be fully on solar or wind power,  
as it does not need basematerial.

The second is to use energy to create all  
raw materials needed for a societal structure.  
As all raw materials are source of all  
kinds of products, services and processes.

The third is to use all materials in the solar system  
and the method to both receive the materials in  
the colonies, baseplanet or other places  
and to be able to use them.  
So access to the full solar system is third.

The fourth is to recreate life,  
as example dna manipulation to the  
kind of having life entities to  
a full life span of the natural ones.  
so using a monkey with dna alteration  
to have monkey to life as long as a natural one  
without deficit or damage during this lifespan.

The fifth one is to be able to recreate  
intelligence, as an example by electronics  
with the description of handling tasks  
in the manner of the imitated object or subject.

These five steps are the ground of a society  
built with technology, and to use it in  
a fashion of high civilisation.

Quantum Technology

Quantum particles long distance travelling

As we are able to travel through the universe.

Several questions arise.

How to use technology to travel,  
to build colonies, to make objects usefull  
for living.

How to use technology to communicate at  
long distance.

How to use technology when the new  
found region is not normal or  
is abject in its functions.

As Quantum-Technology is  
the art to use small particles  
to communicate.

As two of them in line,  
can immediate transfer  
pulsebased communication.

Now think of the object printer  
capable of printing a soccerfield big,  
and the information raster of it  
by quantum received.

As to build objects different  
sizes, and to receive its design  
by quantum.

Now an object printer capable  
of creating spheres of two metres large,  
and with an quantumparticle inside.

This would make a vessel able  
to be operated at far distance.

As quantum particles, are  
very rare in comunication devices  
as two of them in line are not widespread

You want an objectprinter capable  
of making objects,

but as well to make new vessels  
to insert one quantum communication particle

As these vessels in theory can be  
operated from long distance  
by example the home system.

So important is to let ships  
with object printers and a  
communication device be travelling  
through the universe.

And when one reaches a suitable  
destination, the bottle neck  
is the amount of quantum particles  
as each vessels needs one.

And the object printer, able to  
find local energy sources.

As to use this kind of technology  
you always have the perception  
of waiting untill a journey  
reaches either a place of life  
or a place of important features.

So to use an objectprinter,  
and to use a treasure of  
quantum particles,  
as it depletes because of  
its rare conditions.

## Telepathy

Communication with reference system

Telepathy is the communication from one mind  
to another mind.

As all humans have a mind as an instrument  
As in youth one learns to think in several kinds of action.

As for children daydreaming about a pleasant time  
is the most prime ability to think.

As to have the mind is to use it as a visionary instrument to see what is not yet existing to see what gives benefit.

And as to have a memory seeing the past when a point of date and time is asked to recollect.

As the mind is able to have telepathic communication, it is to be trained from early youth.

As we know the example, if you blind the eye of a young child it loses sight for the whole life.

As to train telepathic communication is not only think of the message but to use the reference-system as well

If you would send a thought on a close friend and the other receives he would think of a close friend to only with a different name, and different face.

As the reference system is used for creating the message, the reference itself is for everyone different.

Thinking of parents and sending it, gives other parents to be thought of.

As the reference system is not only for close persons different,

for example sending a message about religion. one sends it as a message about the saviour or shepherd, but the other receives it as thinking about a royal family.

As telepathy is about the reference-system the messages need to be understood with detail information

As when having important communication, a whole nation would depend on just one message.

Ether and Akasha

Worms creating lines of akasha and travel

As the comparison with air and water.  
flying through the air is easy and  
quick, yet through the water you move slow.

As the air compared to space,  
space has less friction and  
more difficult to push yourself forward.

As space, is intertwined in the whole galaxy.  
now suppose a worm can create a hole through space  
making the underlayer visible, like air  
creating pathways to ease up the travel.

This worm creates a whole network of lines  
capable of easy travel.

like the difference between water and air.  
this underlayer is called akasha or ether.  
with the explanation that  
akasha is the underlayer and the lines  
create a method of travelling

The lines make travelling possible  
with higher than lightspeed.

As the lightspeed for mankind  
is the highest to suppose as a concept,  
as eyes the organ of intelligence and understanding  
are depending on light.

So above lightspeed you do not say  
this measure or that count or formula  
but saying it is above lightspeed.

As the akasha with lines made possible  
to travel the galaxy  
one asks if everything turns,  
how to fly the right direction.

The solar system, all the planets  
turn around the solar orb,  
but the solar system itself  
has a dynamic fixed place.

so from the solar system  
to the galaxy is a fixed route  
and only the last miles in the solar  
system need a measured flying route.

Biotop Layer  
Protection layer above surface

As on earth we have a layer of ozone,  
giving light less damage and the light  
a color of blue in the sky  
and orange at the ground.

As on earth the ozone keeps  
the oxygen and air below it.  
and all beings can breath in  
whichever method possible.

As when for example on planets  
like mars,  
without air, without a layer.

there is a substance with  
effect similar as ozone  
as it is a barrier for all  
radiation and a filter  
for all biological gas substances.

This substance by nature floats  
two miles above the surface.

This substance by nature keeps  
air and gas below,  
and space above.

It is not tainted by solar light  
by which it functions as a  
ozone layer on earth.

This layer is called  
a Biotop layer

This substance as a layer  
can protect planets without  
a hemisphere as to be able

for beings breathing oxygen.

Biocore

A ground to all journeys

As human mankind flies to space,  
to the far boundaries of the universe.

As human mankind used spacecrafts  
with a form factor and a needed functional  
placement it will sooner or later  
visit other worlds.

But yet if a journey takes more than  
two weeks, outside the outer boundaries of earth.  
the grounding effect of earth will not be visible.

and the energizing function of the solar orb  
will not give the feeling to be energetic.

As most people know without sun,  
feelings of depression start to occur.

And without earth,  
one loses itself in feelings, thoughts  
without knowing the measure at their  
own beliefs.

So for journeys to start,  
the grounding effect of earth  
and the energizing effect of the solar orb  
needs to be artificially created.

As to fly more than the distance to the  
closest solar system will need more  
effort than we still think.

selfaware robotics

As we understand life and obligatiojn

The art of technology about robotics  
is called rabautica.

As its the combination of philospothy  
ethics, religion and science.

As its not about robotics alone,  
its about them having awareness  
and the concept of being a self  
or autonomous entity.

As selfawareness  
is not only visioning life  
but having a lifepurpose  
as being continually in change.

as robotics being rabautica  
is about intelligence bound  
by awareness and even with  
a form capable of life.

A human with awareness  
is having the freedom  
to endorse goals to become  
either happy or successfull.

As to be happy is with the  
lifeparts giving satisfaction,  
as a marriage, as a job,  
as having children.

As the purpose to be successfull  
is in a kind of duty,  
or theme which spans life to the fullest.

When robots would be selfaware,  
what purpose would they find.  
and how would we allow objects of creation  
to be active beyond the boundaries of  
human interference and understanding.

The art of robotics is  
rabautica as the robots  
are with intelligence,  
and able to use intelligence.

As when we compare animals to humans,

our human form has the capability not  
only to understand or to have insight  
but to cooperate coordinate and to  
be active and interactive with others.

The use of robotics,  
yet some say what use do they have.  
but almost always,  
when technology is a common art  
everyone says,  
this is our birthright to use  
technology of certain kind.

The art of rabautica gives  
us a workforce capable of  
colonizing planets far away  
as well the use of robotics  
for our daily routines.  
as our safety will be in  
their hands.

dimensional grid  
A future telling of centigrad

As the use of dimensions for both  
travel, matter and time.

As we have place dimension  
time dimension  
and clause dimension.

Suspect a dimension without placement  
as location, as all spots on  
the same time, place and matter.

As to make an object from reality in it  
and in another out of it  
without place, time or other conditions.

As to move electricity through it  
is without timelapse, friction  
or place.

As its beyond quantumtechnology

its able to use all kind of techniques to be coordinated.

As from communication through coding of a substance.

As from energy convergant as place in place out without loss of quality.

As from object placement one spot in another out.

As this dimension without space, time, matter conditions when used can even bring us to a different spot in reality. and able to communicate instantly at all places.

The theoretically condition of time, is unknown for it has no method of proof in reality or time itself.

Dimensions codex

Within the anchor dimension all are independently existing

As we all know dimensions to be a word or term depicting the kind of measure we have on either visibility, time or theoretically means of existence.

As theory is the dimension above the visible three, as depth, width and height.

As theory the dimension above the time as witness.

As these are four dimensions and coupled or combined into the existence of our humane life.

As we look in the universe. we tell of a dimension

with our body or soul as the anchor.  
name it the dimension of our self-image.  
as we always describe by naming  
characteristics of either our body,  
our name, or our behaviour.

As dimensions point to a direction  
of either a waypoint,  
a mark of visibility.  
or a means of purpose, need or other  
behavioural requisite.

As dimensions above these  
words are not to be recognized  
even when evidence would point  
in their natural existence.

As a dimension is depicted  
by words, even when an image.  
and is theoretically with  
a purpose

As all dimensions can either  
be proved by witnessing its existence.  
as we do not influence or  
manipulate its conditions

or is proved by a formula  
of mathematical or physical kind

as the formula be proved by  
inserting a formula and receiving  
a fixed answer.

As the scientific proof is  
that dimensions do exist  
but to have it proved  
the use of a scientific enquiry is  
valid.

As the dimension as ground  
of all dimension is proved  
by the witnessing of all  
dimensions above or within  
or beneath these dimensions.

As this head-dimension  
is called the anchor dimension.

As this anchor dimension  
is the formula of all  
witnessed dimensions within

the scope of witness value.

As a value is of the kind  
not to be manipulated or influenced.

As a dimension is existing  
without external conditions,  
otherwise it would depend  
on the existence of an element  
and thus not with a independent existence.

As the general anchor dimension  
is the ground of reality  
as within holds all dimensions.

As the personal anchor dimension  
has its centre of the witnessing  
being, either by description  
of behaviour or visible marks.

As a dimension is prooved  
by being independent  
as without conditions to exist.

As a mathematical dimension  
only exist when the formula  
is prooved by a fixed answer

As a dimension not  
influenced or manipulated  
prooves its existence  
as being unconditional

Soft technology  
We replaced by portal to all agnites

As we know telepathy, transgression and other words  
have a specific meaning.

As we in our human body have a portal  
the gate through which we act, communicate  
being aware of subjects.

A portal to the spirit giving  
consciousness, awareness

the ability to feel happy and pain.

A portal to the mind giving  
thoughts and creating action  
based on mind-activity.

As these portals have their ground  
and essence in the body.

As when creatures live for a million years  
they choose a new body and by portal-activity  
transgress it to the new body.

As these portal-transgression to base  
a spirit to a new body  
as to live on, as so called eternally.

As to transgress a mind is to have  
its memories and methods being transferred.

As for beings with agnate replacement  
call a new body with the same dna  
they then transfer the portals as so called.

As these are the soft-technology.  
it gives the ability to

As an addition, to have dna-maximalisation  
one does not want strength and intelligence  
at the same time.

So called role-maximalisation  
and so called safety measures.

As the so called example  
that medicines for psychic disability  
change the portal activity  
either diminishing or other forms.

Scientific enquiry  
Prayer as a fruitful source

As technology and science have their sources.

We name far away a single company

giving tech for a costprice  
as kings give a thousand slaves  
for a science of aircrafts.

We name nearby a system of  
universities to invent and imploy  
the tech of luxerous and prosperity.

As to have a source, name the  
important role models.  
they held their source secret.

As the give a glance on a method  
of scientific inquiry,  
as to call the limitations of science the level  
of intelligence, knowledge and the  
literature to seek proof.

As to ask scientific inventions  
and information by prayer  
as the Holy Spirit,  
As the Archangel Michael  
and the Hindu Goddess Gayatri.

For proof open for matters  
of scientific confirmation.

Thereby all prayers for  
science directed to the gods  
of Christianity and Hinduism.

As to disclose a method  
of scientific inquiry.  
make it all a new day

Energy design  
Prayer as a fruitfull source

As we know currentday technology with chipsets  
with the generic transistor.

As science is full in the kind of energy you use  
as a material base material substance or liquid

As the highest form is to project a design on energy like quantum or smaller and by the design to have a usefull outcome.

As energy is close to light and liquid a full method of creating a substance with a designed layer and designed outcome.

As energy in a very harsh way is the chipsets with a printed copper or silicate layer with a billion transistors and small function parts.

As the base of a chipset is the calculation method of the base core of a computer.

As several function layers above each other as the layer of digital information either zero or one as function.

As the combination of this as base calculation being to calculate variables and to calculate digital formula's

As all the function layers result in a design of consumers function, even when a factory or university uses its still a consumers function.

The consumers function has the hardware electronic design resulting in a usefull product to code all kinds of applications or the use of appliances.

As electronic design is still a very harsh projection of design into a energy substance.

As a layer denser, is not electronic but the use of glass fibre with the use of prisms.

As not to have a disk with a load od fibre wires and small prisms as its used to project on a layer similar to the printing of chipsets.

As the smallest variant is the use of a small device capable of both voice and gesture appliances.

As a small kind of broche on the clothing able to be voice operated without direct

handfunction, and the use of gesture in front or at the side of the body to activate important functions.

As even smaller and denser its not by glass fibre or prisms, but the projection in energy between liquid and energy like light. as a dens form of energy before it deteriorates within the time of given energy lifecycle.

As this liquid energy, as its called either because energy is by its most visible componet named, or because its invisible and named after the closest method of discerning.

As to project energy with a function of computing, is a science never given false presumptions reality.

As in the hindu veda's the highest science is the energy. in all its forms, utilities, and all its kind of appliances and applications.

Thereby the use of artificial intelligence imitative intelligence and elementary intelligence all depends on energy.

As artificial intelligence now adays function at chipsets.

As the other types depend on the preferences of material as the height of computations per second, the utilities and their parts in relation to consumers needs. and the energy and its time of existence. as lighth itself as a computer, close to the light of the sun, nearby is invisible to manipulate as light in our eye is the highest method of discerning.

Energy as the highest science, by this method described in relation to currentday science of computing and the use in society.

Descriptive Intelligence  
Prayer as a fruitfull source

Artifiical intelligence  
imitiative intelligence  
elementary intelligence

Elementary intelligence uses  
all computing ressources available  
as inserted in routing applicances.

Imitative intelligence  
as above so below  
as small as in big  
all indexed functions of life  
as being society with dense layers of  
purposedriven visible remarks.

as artificial intelligence  
by methods and algorithms  
imitate kinds of intelligence  
by calculation driven programs  
used to resolve to life visible outcome.

Elementary intelligence  
when looking at a computer designed  
to search all best jobs for laborcommunity,  
with both curricullum and wished jobs.

As this program runs a hundred years  
and upgrades when labor functions  
appointed have a better alternative.

As when labor allocation as a program  
runs on elementary intelligence design

it needs several remarks as to be effective

it has to run continually and to be continually  
have ressources to function.

it should have a method to compare jobs  
at a level needed for people to experience  
a level of allocation being usefull.

it should be able to continually alter algorithms needed for decision schemes.

As example a search engine needs a similar kind of allocation too. based on important core driven object-seperation.

As elementary intelligence is used for all society bases management functions as social described, science described, and political enquiry.

As social described one functiojn is job allocation, but the need for allowance the need for hospital-allocation of schemes based on both the ressources how much how many and the divisions of the total amount of applicable units. either people either material either functions like buidlings, factories.

Imitative intelligence is the use of all found schemes as active in a society based on natural individuals.

as every human has its needs, not based on a formula.

As all humans fit in a society or social model and even a political choice is not certain to be predicted.

As imitative intelligence indexes all life functions as based in a organisation, a model, a method or either formulabased mathematical effective outcome

A to index is to discern all total functions of being a society and to be a society grounded in cooperation or any other description of a generic tool of combination.

As imitative intelligence is based on the indexing of society in full and all parts in the proximation of generic descriptive tools.

As the purpose of imitative intelligence is to have a scientific method to add life to a full life span, as to add society to the full purpose of having harmony, as worldpeace is mathematically called.

As imitative intelligence is by indexing

and by projection the outcome to a method of programming and describing variables and methods in the use of language.

as to discern all parts and to create a language to either communicate or to communicate an outcome, or to communicate by purpose a scheme to either fill in the essentials of a question, or to describe a formula giving a purposedriven outcome based on descriptive visiblilty

as artificial intelligence uses methods of calculation to effect in descriptive outcome.

## Cycles of Creation

Prayer as a fruitfull source

As in robotics the cycle of creations has a threefold kind of categories

The first one,  
we build a robot and it is an exemplare,  
capable of acting, reacting,  
and by fuel able to interact.

The second one is,  
a robotic idunstry,  
they can rebuild, refactor,  
and create with an external factor.  
They always need to maintain their  
factory, and build with the means  
possible, call metal, glass, plastics.

The third one is,  
the robotic industry with an internal  
factor. Call eveery robot knows how  
to recreate, reproduce without the need  
of a factory.

As these three are the main  
characteristics of a robotic industry.

If we would compare to human life,

only the third one is most comparable.

As the first one, depends on the hands of a maker, call the human factory with the project designs of all possible robotic kinds of appliances.

As in the first kind, human coordinated its called an appliance, a robotic appliance.

The second one, is able by robotic interaction to reproduce their own kind of robotics in their broad view on possible robot types with their special interest in any kind of usage. call household, factory of creation human tools, products, services. and the use of mining and climatic changing.

As the third kind, is a robotic appliance, called a robotic external reproduction, as resulting in the internal reproduction.

Then robotics has no external factor, like needing to maintain a factory, its not depending on human coordination to have the function of appliances.

As the third kind, the robotics if compared to human life, would need a full scheme of possible growth.

As a robot uses intelligence of any kind to discern and interact.

As a robot uses power to maintain the value of its body. call not only fuel but as compared to humans to restore body parts.

As a robot uses materials to recreate and reproduce the body of their own kind.

As a robot uses all methods known and able to use to discern the timeperiod, the homesystem and the level of cooperation.

As a small scheme on robotics with a threefold kind of methodics able to either operate robotics, reproduce robotics And internal reproduction.

As to compare with humans humans internally reproduce,

use an intelligence system  
capable of discerning the homesystem  
timeperiods and cooperation.

As cooperation, from the birth off  
the societey cares for children,

the time period, in all times  
they have aconscious choice  
reproducing, and homesystem  
some return to their homegrounds  
to reproduce.

Bastiaan Site Map
